All proceeds go towards keeping SONIKMATTER a cool site.

DE-TRAZOR SOUNDS: programmed using the ROM sounds of a K2000 by Brujo.

Inspired and influenced by the early sounds of the techno and rave underground which emanated from Detroit, Berlin, Antwerp and London.

These soundsets include high energy filtered stabs, harsh FM patches, pads which range from warm and ethereal to hard acid, dark synth-basses, harsh and wicked organs, wild FX and more!

They take your Kurzweil into territory the factory presets didn't dare to and never dreamed of.

All sounds include real-time control of filters, LFO's and effects that enhance their expressiveness, and all programming was done on a K2000 proving once again the power and flexibility of VAST.

BRUJO03.KRZ 74K*

The BRIAN COWELL collection: programmed using the ROM sounds of a K2000 by Brian Cowell.

Over 1000 sounds that cover many styles. Everything from a "house piano" to a heavily layered "Fairlight" impression. Throw in some midi synced "hard core" squelch's, and your on you way to your next hit!

Lots of smooth pads and bright crystal EP's. Not forgetting the strange and the bizarre that only a Kurzweil K2 can do.

You will be amazed by just how many sounds lie beneath the hood of your Kurzweil!

GUNTER'S Piano archive: samples programmed by Gunter Matejicek on a K2500.

Here are some samples of Gunter's YAMAHA C3F Grand Piano. But be warned! Some of these samples will require 32 Meg of RAM or more!

The samples have been recorded at a high or low resolution, with close mikes, and some done from a distance and all in "stereo".

There are 6 files to choose from.

KURVE-STATION project: samples programmed by Brian Cowell on a K2000.

What do you get when you cross a Kurzweil with a KORG Wavestation? You get the "Kurve-station" project.

Over 180 Meg of samples ready for you to load into your K2. Plus another 80 Meg that has never been released before.

Features lots of pads, wave-sequences, synths, and instruments all sampled from the legendary KORG Wavestation. The samples were taken at the same rate as the Wavestation's generating engine (32KHz) so both space and memory is efficiently used.
