

SOUNDENGINE VOLUME #2

AKAI S-1000 Format CDROM

ACD-009

[Visit us on the Web by Clicking Here!](#)

Thank you for your purchase of the SoundEngine.com ACD-009 Volume #2: Vintage Analog & Digital Synths CD-ROM. This CD-ROM is formatted to work with AKAI S-Series samplers, and those that import AKAI formatted sounds from CD-ROM. This CDROM contains over 600 programs containing multi-samples collected from our arsenal of vintage Analog and Digital synthesizers that includes: Peavey DPM series, Peavey Spectrum Bass, Peavey Spectrum Synth, Ensoniq FiZmO, Yamaha FS1r, Emu Vintage Keys, Kawai K5000, Kawai K3m, Kawai K1m, Oberheim Xpander, Oberheim, Matrix 1000, Roland D-50, Ensoniq ESQ-1, Yamaha TX81z, ARP Odyssey, Korg DVP-1, Korg EX800, and more.

These sounds were painstakingly created using stacks of these synthesizers, occasionally processed through our racks of vintage processing gear, looped using Infinity™ Looping Tools, and then mapped on the S1000. Preset variations were created to maximize the possibilities of each multi-sample.

We've collected Basses, Pads, Leads, Glitches, Vocal FX, Digital and Analog Keyboards, and more. Load them up and enjoy. You can check out our other AKAI Format CD-ROMS by clicking [here](#).

Thanks again for your purchase, and don't hesitate to call us for technical support.
