Thank you for your purchase of the SoundEngine.com KCD-003 Kurzweil Upright Pianos CDROM. This CDROM is a unique study of classic UK Upright Pianos – full of character and warmth. This CDROM captures the essence of an Upright Piano, from its strong tone to in some cases its slightly out-of-tune carnival sound. About 45MB of recorded sample data and programs are on this CDROM. While small in size, the CDROM has expertly looped samples that translate to fast loads and high quality. This CDROM is priced competitively considering its unique sample offerings and the time taken to produce this CDROM.

There are four distinct keymaps, each with 10 or so programming variations:

A Hanson Upright: The Hanson is a British upright / overstrung piano with old style action, built in 1908.

A stereo, Velocity Switched Preset: **Hanson Switch**  
A stereo Preset: **Hanson Stereo**  
A mono Preset: **Hanson Mono**

A Ladbrooke Upright: This is a c.1955 with modern action, parallel strung. This is the piano in the honky tonk demo.

A stereo Preset: **Ladbrooke**

We've included 1 or 2 KDFX ambient programs to increase the nostalgia of playing these instruments. That said, many of the presets are programmed "dry" so that the end user may apply the effects of choice.

Recording gear used to capture these instruments:

Microphones: STC 4038, Audio Technica MB3000L, Sony ECM-717.  
Outboard: LA Audio MLX20 mic. pre., Echo Layla 20 bit Audio Interface Card.  
Editors/ DSP: Cubase VST, KS Waves, Propellerheads ReCycle!, Audio Ease Barbatch, Antares Infinity.
